

Energy management and solar energy storage cabinet system for universities

Overview

This research presents an AI-powered Smart Green Energy Management System (SGEMS) that integrates Machine Learning and Reinforcement Learning to optimize energy consumption and solar power generation on university campuses, enhancing sustainability and reducing grid dependency.

Energy management and solar energy storage cabinet system for u

A new approach could fractionate crude oil using much less energy

MIT engineers developed a membrane that filters the components of crude oil by their molecular size, an advance that could dramatically reduce the amount of energy needed for crude oil

How artificial intelligence can help achieve a clean energy future

A look at how AI can be used to help support the clean energy transition by helping to manage power grid operations, plan infrastructure investments, guide the development of novel

Evelyn Wang: A new energy source at MIT

As MIT's first vice president for energy and climate, Evelyn Wang is working to broaden MIT's research portfolio, scale up existing innovations, seek new breakthroughs, and channel

[Explained: Generative AI's environmental impact](#)

MIT News explores the environmental and sustainability implications of generative AI technologies and applications.

[Battery Energy Storage Systems for](#)

[What's the best way to expand the US electricity grid?](#)

Growing energy demand means the U.S. will almost certainly have to expand its electricity grid in coming years. What's the best way to do this? A new study by MIT researchers examines

[IoT-Enabled Campus Prosumer Microgrid Energy](#)

In this paper, a survey of campus prosumer microgrids is presented considering their energy management schemes, optimization techniques,

[College Campuses](#)

Learn how BESS can be used to improve campus sustainability and reduce operating costs.

Energy management system: a case study for a campus microgrid

This article focuses on developing an energy management system (EMS) for a microgrid on a university campus. The microgrid comprises photovoltaic (PV) systems, Battery Energy Storage Systems

[MIT Energy Initiative conference spotlights research](#)

At the MIT Energy Initiative's Annual Research Conference, industry leaders agreed collaboration is key to advancing critical technologies amidst a changing energy landscape.

Using liquid air for grid-scale energy storage

Liquid air energy storage could be the lowest-cost solution for ensuring a reliable power supply on a future grid dominated by carbon-free yet intermittent energy sources, according to a new

Making clean energy investments more successful

New research emphasizes the importance of well-validated models and forecasting tools in evaluating choices for investments in clean energy technologies and policies by governments and

New facility to accelerate materials solutions for fusion energy

The new Schmidt Laboratory for Materials in Nuclear Technologies (LMNT) at the MIT Plasma Science and Fusion Center accelerates fusion materials testing using cyclotron proton beam

Optimization of PV and battery systems in university campuses: A

This research has demonstrated the effectiveness of an integrated approach to electricity cost reduction in university campuses through the combination of PV systems, battery storage, and

New materials could boost the energy efficiency of microelectronics

MIT researchers developed a new fabrication method that could enable them to stack multiple active components, like transistors and memory units, on top of an existing circuit, which
