

Export PV inverter voltage

Overview

Once the set threshold is reached, the smart meter sends signals to the inverter to switch off and stop any more power from being exported to the grid. The excess power is then usually lost as heat energy, although it is sometimes redirected to the ground.

ZERO EXPORT controller - elgris

With the elgris ZERO EXPORT, the power is first redirected into the consumers of the house like water heater or other domestic appliances. The ZERO EXPORT controller measures in real time the power

Planning Guidelines

This inverter is configured for zero export and dynamically limits the power if it cannot be consumed in the household at the same time it is generated. Direct self-consumption can cover 30% to 40% of

Export Control Function

Export Control value can be set from 0W to more than the rated output power. When Export Control set to a value greater than inverter rated power, system will let go of export control restriction.

Zero export means the photovoltaic (PV) system does not export any surplus power to the grid. Instead, the system adjusts its output to match or stay below local load consumption. The
