

Georgetown Gravity Energy Storage Power Generation

Overview

Gravity energy storage provides hundreds of megawatts for several hours. Our energy storage technology stockpiles electricity when it's plentiful, and then returns that same energy back to the grid when demanded. The fast load ramping takes less than 1 second.

Georgetown Gravity Energy Storage Power Generation

The fundamental principle of gravity energy storage technology is to achieve the conversion between gravitational potential energy and electrical energy through the lifting and lowering of heavy objects.

Pumped-storage hydroelectricity (PSH) is the most widely used and highest-capacity form of grid-energy storage. In PSH, water is pumped from a lower reservoir to a higher reservoir, which can then be released through turbines to produce energy. An alternative PSH proposal uses a proprietary high-density liquid, 2+1/2 times denser than water, which requires a smaller head (elevation) and thus decreases the size an
