

Grid-connected inverter frequency modulation

Overview

The use of grid-forming (GFM) control for inverters is an effective method to improve frequency stability in new energy generation systems. Due to uncertain disturbances in microgrids, it can cause changes in system frequency.

A Frequency Adaptive Control Strategy for Grid-Connected Inverters

For a grid-connected inverter (GCI) without ac voltage sensors connected to the weak grid, the occurrence of frequency variation diminishes the accuracy of the

[Grid Connected Inverter Reference Design \(Rev. D\)](#)

This reference design uses a modified unipolar modulation in which switches Q1 and Q2 are switched at a high frequency and switches Q3 and Q4 are switched at a low frequency (frequency of the grid).
