

The current status of solar power generation technology in China

The current status of solar power generation technology in China

China's energy dominance in three charts

China is the dominant force in next-generation energy technologies today. It's pouring hundreds of billions of dollars into putting renewable sources

Solar power in China

As the demand for solar power increases due to climate change, the cheap nature of Chinese photovoltaic cells has resulted in China's solar exports growing

China's Solar Power Generation Overtakes Wind for First Time

China's solar power generation overtook wind for the first time last year as a boom in cheap panels continues to reshape the country's grid and climate trajectory.

[National Survey Report of PV Power Applications in](#)

Technological innovation continued to strengthen China's position in the global PV industry. As of March 2025, China held efficiency records for

nine solar cell

[China's solar capacity installations grew rapidly in 2024](#)

China has more utility-scale solar than any other country. The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 GW of utility
