Perovskite solar cells for building integrated photovoltaics-glazing

The weight of a perovskite solar cell is dominated by the substrate, as the absorber and transport layers are on the nanoscale with negligible weight. Past calculations^{24,25} report that

Perovskite solar cell

Overview Perovskites for tandem applications Advantages Materials used Processing Toxicity Physics Architectures

A perovskite cell combined with a bottom cell such as Si or copper indium gallium selenide (CIGS) as a tandem design can suppress individual cell bottlenecks and take advantage of their complementary characteristics to enhance efficiency. These types of cells have higher efficiency potential, and therefore have attracted attention from academic researchers. Using a
